New vaccines for filarial parasite infection(s) - comprising C-terminal beta-tubulin amino acid sequence from a parasite Example 6, Page 51-53; 67pp; English.

A CDNA clone (141700) codes for the beta-tubulin (R99425) of the filarial nematode Brugia pahangi. The C-terminal portion (see also R99420) of the beta-tubulin is useful in novel vaccines against filarial parasite infections.

Sequence 1347 BP; 262 C; 337 G; 367 T;
                                                                                   19-JAN-1997 (first entry)
Brugia pahangi beta-tubulin cDNA.

Monocotyledonous rice is a diploid plant (2n-24) with a haploid genome equivalent of 431 Mbp (Arumuganathan and Earle, 1991). The relatively small genome of rice, three times larger than that of Arabidopsis, makes it suitable for genomic studies. In order to facilitate positional cloning, physical mapping and genome sequencing of rice, we have constructed a BAC library from Oryza sativa,
transformed into E. coli strain XL2 Blue MRF'. Recombinant clones from the first plating of the library were selected for sequence analysis using T3 and T7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        oryza sativa genomic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Poaceae; Oryza.

Nature 2377 (6547 Suppl), 3-174 (1995)

Nature 2140200

On Sep 12, 1996 this sequence version replaced gi:1397790.
Nipponbare variety using EcoRI as the cloning enzyme. The library contains 55,296 clones with an average insert size of 121 Kb providing approximatley, 15 haploid genome equivalents. The deep coverage allows the isolation a particular sequence with a probability of 99.9 %. Three high density filters, each containing 18,432 clones (doubly spotted), represent the whole library for colony screening and can be requested from the Clemson University BAC/EST Resource Center (www.genome.clemson.edu)."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Q
```

```
claimed which has immunomodulating activity, including the N-terminal acylated and/or C-terminal amidated or esterified forms of up to 60 amino acids, where the peptide-type compound comprises the formula; A-B, where A, B = (R aa76-77L) (aa79-84) or (aa84-79) (Laa77-76R); aa76 = E or V; aa77 = D, S or N; aa79 = R or G; aa80 = I or N; aa81, aa84 = a hydrophobic or small amino acid; aa82 = R or L; aa83 = G or R; and a represents amino acid. The sequence in the brackets may optionally be absent or truncated at any peptide type bond within the brackets. The compounds comprise amino acid sequences related to a class I HLA-B alphal domain (positions 79-84). They can be used to inhibit cytotoxic T-lymphocytes (CTL) from undesirably attacking cells in a host or in vitro. They can also be used in combination with antigenic peptides or proteins of interest to activate CTLs. They can also inhibit the proteins of interest to activate CTLs. They can also inhibit the consequence of the complexity of transplants or for treating autoimmune diseases, e.g. daabetes, rheumatoid arthritis and lupus erythematosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Example 15; Page 36; 80pp; English.
R83061-R83085, R83090-R83096 and R92907-R92914 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is an inverted dimer of residues 75-84 of the alpha-1 domain of the class I MHC HLA-B2702. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CTLS)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             HLA-B2702 CTL modulating peptide (B2702.84-75/75-84).

PY Composit corpirising lymphoid surface membrane proteins - which may per 12: 29pp; Engilsh.

Example: Page 12: 29pp; Engilsh.

Example: Page 12: 29pp; Engilsh.

CC R95413, and R95415-R95431 represent palindromes and fragments of comman-leucocyte-associated antigens. This sequence represents the corporation p74 from a T-cell lysate. p74 is a T-cell surface membrane composition associated with T-cell activation in mammalian T-cells, and is also immunologically cross reactive with the heat shock protein H8c70.

CT of the protein p74 from a T-cell activation in mammalian T-cells, and is also immunologically cross reactive with the heat shock protein H8c70.

CT of the protein p74 from a T-cell activated by 1945 so a suitable coll with an amphoteric detergent, and then passed through an affinity column containing a covalently bound HA-B2702 palindromic peptide.

CC Compositions compressing the extracellular fragment of p74 and compositions compressing them with the extracellular portion of p74 and determining the amount of binding between the candidate compound and p74.

CT -cells, by combining them with the extracellular compound and p74.

CC T-cells, by combining them with the extracellular composition of containing T-cells and antigen presenting cells (APCS), by adding to the containing T-cells and antigen presenting cells (APCS), by adding to the containing T-cells and antigen of the p74 ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ä

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Example 15; Page 36; 80pp; English.
R83061-R83085, R83090-R83096 and R92907-R92913 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is an inverted dimer of residues 75-84 of the alpha-1 domain of the class I MHC HLA-B2702. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to administration for a limited period of time (compared to the lifetime modulate (or limited) period of the cyptotoxic I lymphocytes (CTLs) of the patient.
formation of biomass or a desired product, e.g. the product may be lactic acid which results in the acidification of dairy products. The method is more efficient than currently used methods of biomass production. Sequence 469 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                           HLA-B2702 CTL modulating peptide (B2702.84-75/75-84(T)). Cytotoxic T lymphocyte; CTL; major histocompatibility complex; MHC; immunosuppressant; graft versus host disorder; transplantation; therapy; class I MHC; HLA-B2702.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     16-MAY-1996 (first entry)

Pur menunomodulating dimer peptide(s) - based on a class I HIA-B
alpha-1 domain, used for preventing rejection of transplants or
alpha-1 domain, used for preventing rejection of transplants or
treating autofimmune diseases

Example 1; Page 19; 41pp; English.

Example 1; Page 19; 41pp; English.

Continuing autofimmune diseases

CC detrivity, A peptide-type compound or variant is claimed which has
activity, A peptide-type compound or variant is claimed which has
activity, I carly setting the N-terminal acylated and/or
C-terminal amidated or esterified forms of up to 60 amino acids, where
CC (R aa76-77L) (aa79-84) or (aa84-79) (Laa77-76R); aa76 = E or V; aa77 =
CC S N; aa79 = R or G; aa80 = I or N; aa81 = a hydrophobic or
CC small amino acid; aa82 = R or L; aa83 = G or R; and as represents amino
CC acid. The sequence in the brackets may optionally be absent or truncated
CC acid. The sequences related to a Class I HIA-B alphal domain (positions
CC anino acid sequences related to a Class I HIA-B alphal domain (positions
CC 19-84). They can be used to inhibit cyctoxic I-lymphocytes (CIL) from
CC undesirably attacking cells in a host or in vitro. They can also be
CC undesirably attacking cells in a host or in vitro. They can also be
CC activate CTLS. They can also inhibit the proliferation of T cells in
CC response to anti-CDS. The peptide can be used for preventing rejection
CC response to anti-CDS. The peptide can be used for preventing rejection
CC remainstant atthritis and lupus environmented diseases, e.g. diabetes,
CC used for defection and diagnosis. The products can also be
CC used for defection and diagnosis.
                                                                                                                                                                                                      Example 15; Page 36; 80pp; English.
R83061-R83085, R83090-R83096 and R92907-R92914 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is an inverted dimer of residues 75-84 of the alpha-1 domain of the class I MHC HLA-B2702.
These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to.a patient in conjunction with a subtherrapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CTLs)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            19-JUN-1998 (first entry)
Peptide B2702.84-75r/75-84 tested for immunomodulating activity.
Immunomodulating dimer; immunosuppressant drug; CTL activation; transplantation; autoimmune disease; Class I HLA-B alpha-1 domain;
                                                                                       Extension of acceptance period of transplants from MHC unmatched donor hosts - using Class I B75-84 MHC antigen of the recipient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  .,

They immunomodulating dimer peptide(s) - based on a class I HLA-B alpha-1 domain, used for preventing rejection of transplants or treating autoimmune diseases.

Example 1: Page 19: Alpp: English.

Example 1: Page 19: 41pp: English.

Example 1: Page 10: 41pp: English.

Correction of Land Mish 19: 41pp: English.

Correction activity, including the N-terminal acylated and/or correction activity, including the N-terminal acylated and/or compound comprises the formula: A-B, where A, B = correction activity as a 2 - R or G; as 40 - 1 or N; as 41, as 4 - a hydrophobic or small amino acid; as 82 - R or L; as 83 - G or R; and ar represents amino acid. The sequence in the brackets may optionally be absent or truncated at any peptide type bond within the brackets. The compounds comprise amino acid sequences related to a class I HLA-B alphal domain (positions of 10: 481). They can be used to inhibit cytocoxic T-lymphocytes (CTL) from undesirably attacking cells in a host or in vitro. They can also be activate CTLS. They can also inhibit the proliferation of T cells in response to anti-CD3. The peptide can be used for preventing rejection of transplants or for treating autoimmune diseases, e.g. diabetes, response to activate and lugus erythematosis. While Strands Indicate membrane proteins - which may while Strands I wapping and differentiation of CTLS.

Tompsons. comprising lymphoid surface membrane proteins - which may inhibit cytolytic activity and differentiation of CTLS.

Example 12. 20pp. English.

Readly 3, and R95415-R95431 represent palindromes and fragments of human-leucocyte-associated antigens. This sequence represents the CC R95413, and R95415-R95431 represent palindrome engreenes are became be used too isolate the protein pp4 from a T-cell lysate. P74 is a T-cell surface membrane protein pp4 from a T-cell lysate. P74 is a T-cells surface and is also immunologically cross reactive with the heat shock protein R9570. P74 is found in a limited number of cell types, but is particularly expressed on B and T cells. P74 can be isolated by lysis of particularly expressed on B and T cells. P74 can be isolated by lysis of a suitable cell with an amphorteric detergent, and then passed through an affinity column containing a covalently bound HLA-B2702 palindromic peptide. Compositions comprising the extracellular fragment of P74 combined with HLA-B2702 c60-84 (see R95416), induces calcium influx, and inhibits cytotoxic T lymphocyte (CTL) indifferentiation or cytolysis.

Candidate compounds can be screened for their effect on the cytolytic activity of T-cells, by combining them with the extracellular portion of p74 and determining the amount of binding between the candidate compound and p74. Modulation of CTL activity can be inhibited in a cellular composition containing T-cells and antigen presenting cells (APCS), by Sequence 20 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

Claim 58: Fig 15; 235pp; English.

Canine Y5 receptor (R95941) was identified as the homologue of rat
hypothalamic Y5 receptor (R95940), isolated as an 'atypical Y1
receptor. The receptor belongs to the G protein-coupled receptor
superfamily. It is encoded by a cDNA clone (see also T30435) that
was isolated by PCR amplification using primers (T30436-37) based
on human and rat cDNA clones (T30433-34). Recombinant canine Y5
receptor can be produced in prokaryotic or eukaryotic (e.g. COS,
293 or Sf9 insect) host cells. It is used to identify Y5 ligands
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Canine IS receptor.

YS receptor; atypical neuropeptide Yl receptor; feeding behavior;
YS protein coupled receptor; agonist; antagonist; obesity;
bulinnia: anoraxia.

Canis familianis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Modifying feeding behaviour using Y5 receptor (ant)agonists - increases or decreases food consumption, for treatment of e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Length 20;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DNA encoding canine hypothalamic atypical neuro:peptide Y/peptide YY receptor, Y5 - useful for identification of compounds which are captor, Y5 - useful for identification of compounds which are captale of modifying feeding behaviour.

SC Claim 5; Fig 15: 273pp: English.

C The sequence is that of a Y5 receptor (Y5-R).

The sequence is that of a Y5 receptor (Y5-R).

Specifically binds to and activates or inhibits a Y5-R by measuring a second messenger response. The chemical compounds can be used to reduce the activity of a Y5-R. In particular, inhibitors can be used to treat obesity and activators can be used to treat a norexia. Antagonists capable of alleviating (by decreasing the cativity of Y5-R) an abnormality can be identified by administering a city of Y5-R) an abnormality can be identified by administering a contential antagonist to a transgenic mammal as above, and determining whether the substance alleviates the physical and behavioural
                                                                                                                                                                                                                     ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     abnormalities displayed by the transgenic mammal as a result of overactivity of a Y5-R. Agonists can be identified in a similar manner but where the abnormality is alleviated by increasing the activity of

PT NP encoding the neuropeptide Y-Y5 receptor - for screening for pr DNA encoding the neuropeptide of (RPY) anti-obesity agents.

PT NPY-Y5 antagonists and agonists, useful as anti-obesity agents.

PT NPY-Y5 antagonists and agonists, useful as anti-obesity agents.

PT NPY-Y5 antagonists and agonists, useful as anti-obesity agents.

PT NPY-Y5 antagonists and agonists of (NPY) anti-obesity agents.

PT NPY-Y5 antagonists and agonists of (NPY) anti-obesity agents.

PT NPY-Y5 antagonists and action coupled receptor (C designated NPY-Y5 receptor, is a G-protein coupled receptor of a the hypothalamic library. Human (NI5230) and mouse (NI5233)

CC NPY, which is involved in appetite/obesity regulation. Its amino acid sequence was deduced from a cDNA clone (T66911) isolated from a rat hypothalamic library. Human (NI5230) and mouse (NI5233)

CC NPY, which is involved also been identified. The receptors can be expressed on the cell surface of host (pref. CHO, human embryonic c tidney 293 or insect $f$) cells. The receptors or host cells can be used to screen for (ant)agonists of NPY useful as potential hypothensives, cardiovascular drugs, neuronal growth factors, anti-psychotic, anti-obesity or anti-diabetic drugs.

C;Comment: This enzyme, located in peroxisomes, catalyzes the oxygen-specific oxidation
this reaction is the initial step of the peroxisomal beta-oxidation system. In C. trop
gene family.
C:Comment: The peroxisomes are eukaryote subcellular organelles that generate and degrad
ic reactions as well as the enzymes involved are usually different from the mitochondria

PEPE. 75:45-53(1998).

-! FUNCTION: RECEPTOR FOR NEUROPEPTIDE Y AND PEPTIDE YY. THE ACTIVITY
OF THIS RECEPTOR IS MEDIATED BY G PROTEINS THAT INHIBITS ADENYLATE
CYCLASE ACTIVITY. SEEMS TO BE ASSOCIATED WITH FOOD INTAKE. COULD
BE INVOLVED IN FEEDING DISORDERS (BY SIMILARITY).
-! SUMILARITY: BELOATION: INTEGRAL MEMBRANE PROTEIN.
-! SIMILARITY: BELOAGYS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.
-! HIGHEST TO TACHYKININS RECEPTORS.
                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              LIJ

"Submitted (OCT-1998) to the EMBL/GenBank/DDBJ databases.

-! FUNCTION: RECEPTOR FOR NEUROPEPTIDE Y AND PEPTIDE Y: THE ACTIVITY

OF THIS RECEPTOR IS MEDIATED BY G PROTEINS THAT INHIBITS ADBRYLATE

CYCLASE ACTIVITY. SEEMS TO BE ASSOCIATED WITH FOOD INTAKE. COULD

BE INVOLVED IN FEEDING DISORDERS (BY SIMILARITY).

-! SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.

-! SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.

HIGHEST TO TACHYKININS RECEPTORS.

** NOTE: This is a "vorking draft, sequence. It currently

** consists of 28 contigs. The true order of the pieces

** is not known and their order in this sequence record is

** arbitrary. Gaps between the contigs are represented as

** runs of N, but the exact sizes of the gaps are unknown.

** This record will be updated with the finished sequence

** as soon as it is available and the accession number will

** be preserved.
